

Welcome to the written/video guide to D4 of T19 "Auguria's Exploration".

Here we will resolve doubts, we will show one of the most solid and simplest strategies to complete this d4, for this we will need the following:

-Build-

*Skyent Soul's Cloud Reaper

*Skramblegg Shield (Can be exchanged for Skyent for cleanse)

*Flamium Helmet (Gives your team 2 SP when you expend 5 SP)

*Exothermic Jacket

*64 Bit Clover

*Skramblegg Bracelet (Can be exchanged for Skyent for cleanse)

*Monarch Command (It can be Supply or Divine ward, as long as it has a double attack everything is fine)

*Any pet, there is no pets and brains in this d4 lol.

*Speed runes or whatever you have on hand, The accessory will give you the dual strike you need

*Enchants: Same as runes

-The distribution of statistics that we will use will be purely based on speed, our job will be to be a kind of speedbait to be able to absorb our allies and prevent them from dying with the enemy brains

-Team-

Tank: Gello/Teith/Bleeximum/Kimusaba

Gello: Deflect pumps x3, Redirect bone, any chip

Teith: Evade pumps x3, redirect bone, Any chip

Bleeximum: Block pumps x3, Redirect Bone, Any chip

Kimusaba: Dr pumps x3, Redirect Bone, Any chip

Dps: Lerky (If you have 2 +5 lerky you can take Blinka or another tank, with 2 +5 Lerky is the damage necessary to complete the d4)

Lerky: Dual strike pumps x3, bone your next ability has X chance to be empowered, Chip gains more damage depending on how much life the target has

-Gameplay-

As I mentioned before, our role in the team is to activate Flamium as many times as possible, for this we need to focus on 2 things

- 1- Give SP to ourselves and heal the target when necessary with "Skymark"
- 2- Apply the "Skyent Avatar" skill so that our fams absorb the next attack they receive

Robosaba

We will try to hit Robosawa as less times as possible, his brain activating when hit can eliminate our fams quite easily, we will make sure to apply "Skyent Avatar" as many times as possible to avoid damage to his brain.

Washi

Being an enemy that can eliminate us just by activating E.M.P, we will make sure that we are ALWAYS giving "Skyent Avatar", once it is the Lerky's turn we will try to kill it with E.M.P's own activations as shown in the video

Dr. Ediblegh

As shown in the video, we will try to give "Skyent Avatar" to our tank and ourselves, since its OSP hits the weakest enemy. Once it is our Lerkys's turn we will focus on him with his "Destiny Chaser" ability. One turn should be enough to eliminate him.

Trash

There are no particularly difficult enemies, just be careful with Colorteebee

FAQ

Q: Can it be completed with Tier 20 equipment?

R: Yes, the build is completely capable of completing the d4 without any problems

Q: My Lerkys are +4, do you think it is possible to complete it?

R: Yes, it will take you more tries, but once you get the hang of the dungeon it becomes purely a strategy.
